Cable tray elbow code

Overview

CODE Manufacturing Ltd. is a leading manufacturer of cable tray systems. We have a 50,000 sq. foot manufacturing facility in Port Coquitlam, B.C. and are 100% Canadian owned and operated.

Key Takeaways

Cable tray elbows must comply with ANSI/NFPA 70 (NEC), NEMA VE 1/VE 2, and relevant ASTM standards to ensure safe and proper installation.

Definition and Purpose

A cable tray elbow is a fitting used to change the direction of a cable tray system, either horizontally or vertically, while maintaining proper support and bend radius for the cables. Elbows are essential for routing cables around obstacles and ensuring mechanical protection without damaging conductors. Applicable Codes and StandardsANSI/NFPA 70 – National Electrical Code (NEC): Provides general requirements for cable tray systems, including support, spacing, and installation practices.

NEMA V

E 1 – Metallic Cable Tray Systems: Covers design, materials, and construction of metallic cable trays, including elbows.

NEMA V

E 2 – Cable Tray Installation Guidelines: Offers guidance on installation, including minimum bend radii, support intervals, and proper use of elbows.

AST

M Standards: Commonly referenced for material specifications: ASTM A123: Zinc coatings on steelASTM A653: Galvanized steel sheetASTM A1011/A1008: Steel sheet specificationsASTM B633: Electrodeposited zinc coatings Design ConsiderationsBend Radius: Elbows must maintain the minimum bend radius for cables to prevent damage, typically specified by the cable manufacturer or NEC guidelines. Dimensions: Elbows are available in various widths (6"–36") and rail heights (4"–7") for ladder and solid-bottom trays, with radii ranging from 12"–36". Material: Aluminum, steel, or stainless steel are commonly used, selected based on environmental conditions and corrosion resistance.

Installation: Elbows should be installed using compatible connectors and supports to maintain structural integrity and comply with safety standards.

Summary

When specifying or installing cable tray elbows, ensure compliance with NEC (ANSI/NFPA 70), NEMA VE 1/VE 2, and relevant ASTM material standards. Proper selection of bend radius, material, and dimensions is critical to protect cables, maintain system integrity, and meet regulatory requirements.

Cable tray installed in a hazardous location must contain only those cables that are appropriate for this type of environment as defined in Chapter 5 of the NEC.

Codes and Standards | Cable Tray Institute

The Cable Tray Institute is making available the current edition of this practical guide for the proper installation of aluminum or steel cable tray systems. These guidelines will be useful to engineers,

GUIDE CABLE TRAYS TECHNICAL

Specifies requirements for metal cable trays and associated fittings designed for use in accordance with the rules of Canadian Electrical Code, Part I and the National Electrical Code®

Cable Trays/Ladder Tray

Click the image below for full PDF specs on any of our ladder tray and cable tray. Our cable tray keep your electrical cables in place, prevent abrasion and wear, and protect them from harm.

Best Practice Guide to Cable Ladder and Cable Tray Systems

This publication is intended as a practical guide for the proper and safe* installation of cable ladder systems, cable tray systems, channel support systems and associated supports.

Itray Aluminum Ladder Tray Elbow Horizontal Fittings

Please use this chart to identify your part number when ordering or specifying any Cablofil product. Horizontal elbows provide directional transitions in cable tray systems, with 4"–7" rail heights, 6"–36"

Document DICOS

To install the cable tray supports, first find the required elevation from the floor to the bottom of the cable tray and establish a level line with a laser or a nylon string.

Document DICOS

A channel cable tray can be added to an existing cable tray system using the method illustrated in Figure 3-89 to add approved cabling systems. Refer to the loading information of the existing cable

Cable tray manual

INTRODUCTION The B-Line series Cable Tray Manual was produced by our technical staff. We recognize the need for a complete cable tray reference source for electrical engineers and designers.
